# 5 UX mistakes, killing your online store

and How to Fix Them

You can have the best products in the world, but if your users struggle to browse, compare, or buy — your store loses sales.

As a frontend developer specializing in e-commerce experiences, I've identified five common UX mistakes that silently kill conversions. Here's how to fix them.

LinkedIn

# MISTAKE #1:

## Cluttered Product Layout Problem

Overwhelming users with too many elements, inconsistent spacing, or non-intuitive navigation.

### Fix:

- Use whitespace strategically.
- Limit visible product options per row.
- Ensure product images are consistent in ratio.
- Test readability on mobile first.

Tech Tip: Use a grid system (e.g. CSS Grid or Tailwind's responsive utilities) to ensure visual balance.

Portfolio

# MISTAKE #2:

Slow Page Load Times

Problem:

Fix:

- Optimize images (WebP, lazy loading).
- Use code splitting and caching.
- Minify JS/CSS.

Tech Tip: Use Lighthouse or Sentry performance monitoring to track page speed.

LinkedIn

# MISTAKE #3:

## Confusing Checkout Process

### Problem:

Users abandon carts when checkout feels long or complicated.

### Fix:

- Keep checkout to 1–2 steps max.
- Offer guest checkout.
- Show progress indicators.

Tech Tip: Reuse your React components with clear validation and immediate feedback.

# MISTAKE #4:

## Poor Mobile Optimization

Problem:

Fix:

- Use responsive layouts and test across screen sizes.
- Make touch targets large enough.
- Prioritize vertical scrolling over horizontal swiping.

Tech Tip: TailwindCSS makes mobile-first design frictionless — start with sm:, md:, lg: breakpoints.

Portfolio

# MISTAKE #5:

## Ignoring Visual Hierarchy & CTA Design

### Problem:

Users don't know what to click — or worse, don't notice your "Add to Cart."

### Fix:

- Use consistent color contrast between background and CTA buttons.
- Keep primary actions visually dominant (your accent color).

Tech Tip: Use your brand palette for emotional consistency between light/dark themes.
